MoneyFinder

# Get your money.

AI agents find the New York tax and grants benefits you're owed, file for them, and bring the money home.

THE PROBLEM

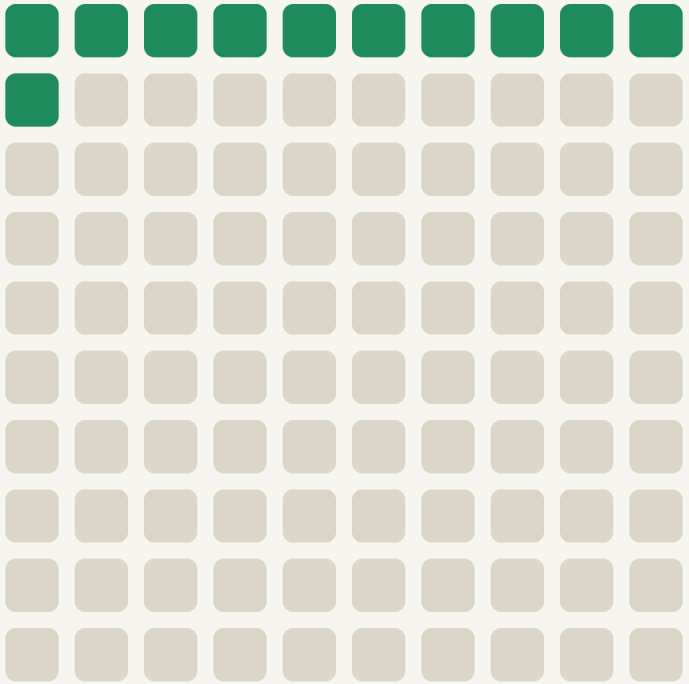

# $15 billion unclaimed

in federal tax credits was available to small businesses, yet **about 9 in 10 eligible businesses** never claimed it.

Owners want the money. Finding it is tedious: countless forms, scattered rules, no place to start.

**MoneyFinder fixes that**

Our agents learn your business from its data, match you to niche New York credits and grants, file the forms with an Anchor browser, and track each claim until the money arrives.

**11% claimed**

**89% missed out**

Source: Families USA & Small Business Majority (2012); White House estimate. Small business health care tax credit, tax year 2011.

THE PATTERN

# Billions sit unclaimed, and it makes headlines

**$1.6 billion on Long Island**

News 12 · NYS Comptroller data

**$4.8 billion in Ohio**

State unclaimed funds program

**New Yorkers urged to check**

News 12 · Statewide unclaimed funds

These headlines cover personal unclaimed funds and refunds. The same gap exists for business credits and grants.

LIVE DEMO

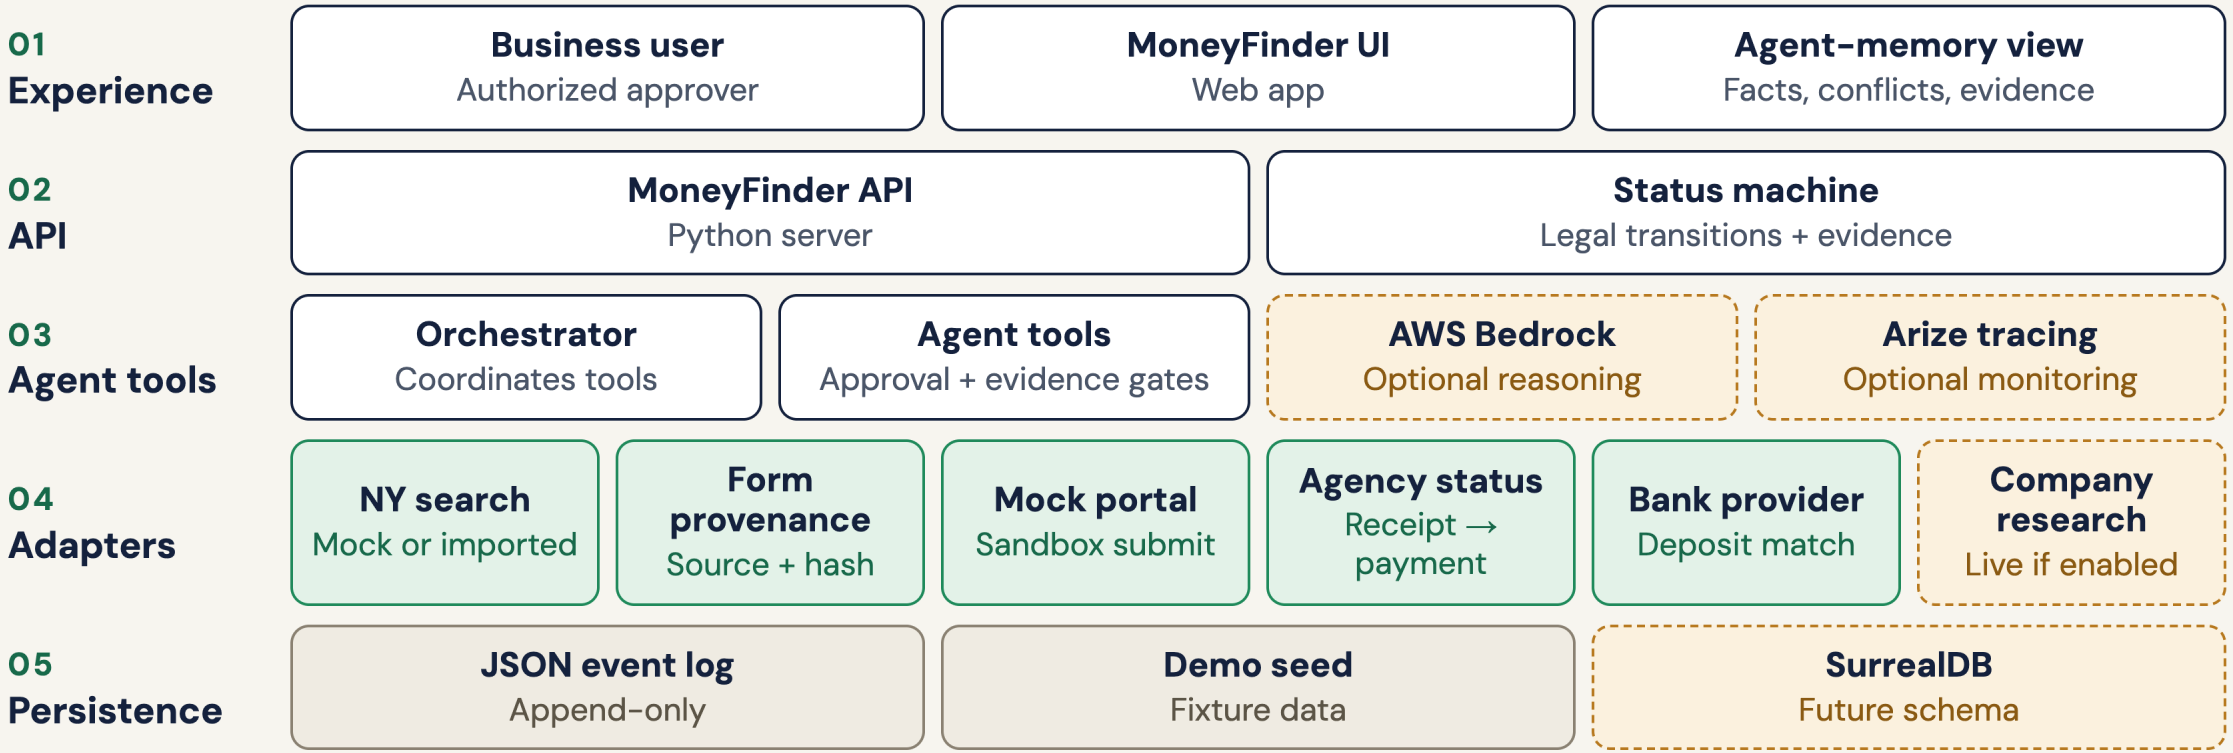

# Watch it work.

One New York small business. MoneyFinder finds what it’s owed, files the claim, and tracks it to payment.

HOW IT WORKS

# MoneyFinder system architecture

Find NY credits and funds · prepare claims with provenance · approve · submit · track evidence

App code · Mock / synthetic provider · Optional or future · Data

# What we used

MoneyFinder build summary

### Cursor tools

Read, search and edit files, run tests, inspect lints, manage tasks

### Terminal / Python

Ran the local server and the test suite

### Git + GitHub CLI

Committed, pushed, reviewed and merged PR #4

### Browser testing

Verified landing, tracker, claim detail, progress bars, rejection, agency and bank flows

### JSON persistence

Demo claims, forms, events, evidence and agent-memory history

### Mock providers

Synthetic NY search, agency status, bank deposit and claim portal

### SurrealDB schema

Target data model; the demo currently runs on JSON

### Reference ZIPs

Dashboard, thermometer and money-counter designs as visual inspiration
